

## Cross-Connection Control / Backflow Prevention Program

### Objectives to be achieved with this program

Hardin & Associates Consulting is a business consulting firm located in the Dallas/Fort Worth area. We are comprised of an outstanding staff with many years of experience serving clients throughout Texas. Hardin & Associates has extensive experience working with federal, state and local laws pertaining to operational issues in municipal, state and federal government in the public works, health, and water and wastewater fields. As part of our business plan, we also provide educational services to BPAT, Water, Wastewater and Irrigation professionals, as well as Plumbers, Registered Sanitarians and Code Enforcement Officers.

Development of Public Education Program	●
BPAT and Customer Service Field Inspection Training	●
Cross-Connection Control Survey Inspection Services	●

Hardin & Associates Consulting will review your existing Cross-Connection Control Backflow Prevention Program. We will help in establishing a program that will meet state and federal requirements and address your ability to implement all the required components of the program. We believe a multi-disciplinary approach to the establishment of the compliance program and ordinance is the most effective way to maximize the benefits to your city. We will design an approach which addresses the organizational, managerial, and financial issues pertinent to establishing a comprehensive and proactive program.

At Hardin & Associates Consulting, we can help to ensure the safety of your water distribution system by helping you develop a comprehensive cross-connection control prevention program. Our staff has considerable experience in helping cities develop, implement and manage an effective program.

Texas has promulgated regulations that mandate that all public water suppliers have a program to require backflow prevention devices be installed to protect against contamination of public water supplies. Effective January 1, 1996, the Texas Commission on Environmental Quality (TCEQ) required that all public water systems comply with the Texas Annotated Code, Title 30, Chapter 30. The TCEQ began full enforcement of these regulations and evaluates public water systems for compliance through its annual public water system inspection program. All systems found without a program or with an inadequate program may risk their Superior Water Rating or incur fines from the TCEQ of up to \$10,000 per day until an approved program is in place.

We can help you ensure that your Cross-Connection Control Prevention Program is up to date and meets state and federal requirements.
